FBF DAYTONA '86 UPDATE

A Fast By Ferracci News Report, Roslyn PA 19001

Special Daytona Issue

The Fast By Ferracci racing team opened their '86 season with Pete Johnson taking three 1st place finishes aboard his FBF prepped motorcycles...

AMA CCFS Super Twins - November 1
FORMULA II-3rd (started 30 sec. behind field!)

AMA CCS Formula Twins - November 1
AMA Bott Light & Heavy Mod Production Combined
1st Lightweight-6th Overall Combined

Put yourself in the winner's circle with FBF high-perf componets & services

- Connecting rods (for over 30 models including FZ750,GSX-R750,Ninja 600)
- Valve springs
- Hon-Yam-Kaw-Suz-Ducati O.E.M parts
- Complete Engine preparation
- Machine shop services
- Custom Fabrication
- Distributor for many high-perf after market products

WELCOME WERA FANS!

On behalf of WERA and its staff, we would like to welcome you to the fastest growing spectator sport in America. We hope that you find today's racing exciting and plan to return to our upcoming events. WERA this year takes its hat off and thanks Yamaha, Suzuki, Honda, Yoshimura, Avon Tire, EBC Brake, DID Chain and all other manufacturers who support the 1986 Racing Season. Thank you for being part of this most exciting sport and we hope to continue seeing you at the races!!

"WINNERS"

When it comes to competition riding, whether it's road racing, Moto X, drag, hill climbing, enduro or whatever...

You will find the consistent winners (top riders all) depend on **SPECTRO** lubricants for performance and reliability.

Whatever your riding preference **SPECTRO** motorcycle lubricants will improve your bike's performance.

We can't guarantee that you will win every race because you use **SPECTRO** lubricants, but you will never **DNF** from lubrication failure if you do.

Rad-Induction
Carburetor Recalibration Kit

Ninja Carburetors with
Rad-Induction Kit installed

- **WE DESIGN** elite air intake/carburetor kits for HONDA INTERCEPTORS, KAWASAKI NINJAS, YAMAHA FZ-750, SUZUKI GSX-R750 and SUZUKI GSX-R1100.
- **RAD-INDUCTION** offers the only intake system for the HONDA INTERCEPTOR which utilizes individual K&N filterchargers for each carburetor. *This is the best flowing system available!*
- **THE RAD-INDUCTION** recalibration kit and induction system increases horsepower up to 20%, producing powerful, smooth mid-range and increased top-end speed. Carb kits are custom-assembled to meet your sportbike's needs—full race kits available upon request.
- **KITS INCLUDE:**
 - 4 K&N filterchargers and crankcase filter.
 - **RAD-INDUCTION** air système (HONDA INTERCEPTORS only)
 - **RAD-INDUCTION** carb recalibration kit complete.

WEA CLASSES & CATEGORIES

There are three racing Categories they are:

PRODUCTION

Box stock street motorcycles. There are no performance modifications, allowed to the engine or drive train.

SUPERBIKE

Modified street bikes. The motorcycle may be modified to any extent but still remain potentially street legal.

FORMULA

These are all out race bikes with minimum restrictions. Some are the factory built Gran Prix machines.

VINTAGE

Old bikes

Each category is divided into displacement groups.

PRODUCTION & SUPERBIKE FORMULA

"A" Class = Open displacement "1" = open displacement

"B" Class = 750cc limit

"2" = 250cc limit

"C" Class = 650cc limit

"3" = 125cc limit

"D" Class = 410cc limit

"Clubman" 250cc limit

"VINTAGE"

"1" = 250cc limit

"2" = 500cc limit

"3" = 750cc limit

"4" = open displacement

Certain types of engines are allowed to run larger displacements than the limit for a given class to make up the difference in performance between engine types.

In addition to machine classes there are two different rider classifications:

"NOVICE" = generally a new less experienced racer.

"EXPERT" = a well seasoned racer.

The Novices have black number plates with white numbers. The Experts have white number plates with black numbers.

With all of the different combinations there are 30 races at each event.

COMPETITION CATEGORIES

1. Competition machines must be classified according to actual displacement degree of modification and performance index. For the purpose of better interpreting the Rules, the following definitions are listed:

CATEGORY refers to the type of motorcycle. There are three major categories: Production, Superbike and Formula (Grand Prix). **CLASS** generally refers to an engine displacement grouping within a category.

CHANGE means the addition of aftermarket or "optional" parts or accessories designed to increase safety, performance, reliability or reduce costs.

ALTERED or MODIFIED means any cutting, drilling, bending, welding, brazing or soldering other than normally accepted maintenance and repair procedures.

PERFORMANCE INDEX. When a motorcycle is demonstrably faster or slower than others in its displacement group, it may at the discretion of the Review Committee be assigned to another class.

- a) Any production motorcycle not generally available on the U.S. market, and without full E.P.A. and D.O.T. approval for that market, will be ineligible to compete in its Production class but may compete in its Superbike class. Such a machine may compete in the next higher class with the exception of A Production, which will retain its eligibility.
 - b) All Push Rod engines may ride down one class.
2. All machines must conform to the Technical Inspection requirements of Chapter Seven.
 3. **PRODUCTION:** There must be at least 125 motorcycles available to riders, worldwide, to qualify a machine for the Production category. Proof to be provided by the rider or sponsor.
Production machines are defined as original equipment of manufacturer of motorcycles intended for use on public roads.
The ultimate decision regarding the legality of any machine entered in a Production class is the responsibility of the Chief Technical Inspector for that event in progress. The rider or sponsor of any machine is responsible for producing a service or owners' manual with all parts numbers, specifications and other material required to prove its legality. Legality will be determined based upon the year, model and make of the machine entered. Updating and backdating is not allowed.
The following changes are mandatory or allowable:
a) Rear footpegs may be removed.
b) Rider footpegs may be changed or modified.
c) D.O.T. approved street tires must be used.
d) Chain and/or sprockets may be changed. Shaft drive machines may change gear ratios. The chain guard may be removed for endurance racing only.
e) Handle bars may be changed or altered but, they must be mounted to the stock mounting point.

- f) Rear shocks may be changed or modified.
 - g) Spark plugs and carburetor jets and needles may be changed, provided no other modifications are required to make these changes.
 - h) The complete air box must be retained and an air filter must be properly installed.
 - i) The working internal components of the instrumentation may be removed. The outer housings or dash boards and upper fairings must be retained unless destroyed at that event. The instrument area must APPEAR to be stock.
 - j) EXACT replica replacement fairings may be used on machines equipped with fairings by the factory.
 - k) Grab rails, horns, reflectors, license plate bracket, lower fairing section, and locks may be removed.
 - l) Turn signals, cruiser pegs and luggage racks must be removed.
 - m) Steel braided brake lines may be used and are recommended.
 - n) Brake pads may be changed.
 - o) Clutch plates and springs may be changed.
 - p) Filters may be changed.
 - q) Steering dampers may be added.
 - r) Padding may be removed or added, but the stock seat base and cover must be retained.
 - s) Exhaust systems must remain as provided with no modification of any kind.
 - t) Overbores, up through the fourth oversize, using OEM parts, are allowed up to the maximum allowable displacement limits.
 - u) NO METAL REMOVAL other than overbores as in t) above are allowed in the engine or transmission.
 - v) Headlight lens and bulb may be removed. If the headlight is carried, it must be taped. The headlight fixture must be retained, along with the original mounting brackets and wiring. If requested the stock bulb must be able to be made operational with no modifications, by simply plugging the bulb into the lighting unit.
 - w) Tail light must be taped or removed.
 - x) Oil cooler may be added, but must be mounted forward of the engine and below the headlight fixture in a workmanlike manner.
 - y) A fork brace may be added providing it is fitted in a safe and workmanlike manner.
 - z) "Built up" crankshafts may have their journals welded to the fly weights.
 - aa) Items a) through z) above constitute the entire realm of deviation from showroom stock.
- SUPERBIKE & (Clubman):** Machines that conform to the Production requirements in their origin may be modified to any degree desired with the following restrictions:
- a) Headlight and tail/brake light fixtures must be maintained and mounted in operational condition. Bulb and lense may be removed.

b) Engine must be within the displacement limits of the class for which the machine is entered.

c) Pure racing frames and pure racing fairings are not allowed.

d) Indicated overbores are for Superbike only.

5. **FORMULA:** No restrictions other than displacement as outlined below and in chapter seven.

6. The classes for Production and Superbike are as follows:

A PRODUCTION Honda Hawk 400
Unlimited *15cc will be allowed for overbores

*25cc will be allowed over stock for **FORMULA 1**
overbores. 750 2 & 4 stroke multies

A SUPERBIKE Unlimited twins & singles
EXPERTS ONLY

EXPERT ONLY

B PRODUCTION & SUPERBIKE*

Up to 750cc multies

Up to 1000cc 4-stroke twins

Unlimited singles and push rods

*30cc will be allowed for overbores.

C PRODUCTION & SUPERBIKE*

Up to 650cc 4-stroke multies

Up to 750cc 4-stroke twins

Unlimited singles

Up to 850 push rod

Up to 550cc 2-stroke multies

*K75 BMW

*25cc will be allowed for overbores

D PRODUCTION & SUPERBIKE*

Up to 410cc multies

Up to 500cc 4-stroke twins

Up to 700cc 4-stroke singles

Up to 410cc 2-stroke twins

Up to 450cc 2-stroke singles

Up to 650cc push rod

*20cc will be allowed for overbores

CLUBMAN

Up to 250cc superbike 4-stroke multies

Up to 350cc superbike 4-stroke twins

Up to 350cc production air cooled 2 strokes

Up to 500cc superbike 4-stroke singles and push rods

Up to 250cc superbike liquid cooled 2-strokes

Production Honda CB400(4)

FORMULA 2

Up to 250cc 2-stroke watercooled twins and multies

Up to 410cc 2-stroke air cooled twins and multies

Up to 450cc 4-stroke

Up to 750cc push rod

Unlimited 4-stroke singles

FORMULA 3

Up to 125cc 2-stroke watercooled

Up to 185cc 2-stroke air cooled

Up to 250cc 4-stroke

Up to 400cc 4-stroke singles

*GPz 305

8. Ride up provisions:

A racer may ride up classes, but this will be on a space available basis.

The maximum size grid on any track will be 75 entries. At some tracks this number may be less as safety dictates.

If a race grid is too big to run safely then the racers that have bumped up from a smaller class will be taken off of the grid. Example if C superbike is too big then all of the Clubman bikes will be removed. If the grid is still too big then all of the D class bikes will be removed from the grid, etc.

a) Production and Superbike machines may ride up two categories only.

E up to C; D up to B; C up to A

b) Formula machines may ride up as follows:

3 to 2; 2 to 1

9. Turbo charged Machines:

a) All Turbocharged machines must ride UP one displacement class.

LOSE WEIGHT, GO FASTER, WIN!

The Buell Formula One two stroke motorcycle designed and built by Buell Performance features our high-tech components.

Buell Performance helps reduce your bikes weight with the latest in light-weight high-tech racing equipment. We sell the privateer the same technology that the factory teams use.

Dymag Wheels and Buell Brakes reduce your bikes unsprung rotational weight. It takes almost twice as much power to accelerate rotational weight as it does chassis weight. A pound saved in your wheels is worth two in the rest of the bike. Reducing unsprung weight makes your suspensions job easier. This will improve handling and response.

Dymag Wheels are the only die cast magnesium wheel. Unlike our competitors who use sandcasting we are able to reduce our wheels weight without reducing strength. Die casting gives precise control over the wheels thickness and strength.

This high level of quality is why Dymag Wheels are used by 80% of all Indy car teams and by more Formula One car teams than all other brands combined. They know that reduced wheel weight improves suspension response, handline and acceleration. 16, 17 and 18 inch diameters. 1.85 to 6 inch widths. Prices from \$330 to \$495.

Buell Brakes are the biggest advance in brake technology since 1953. They are 60% lighter than conventional brake rotors and this means a substantial reduction in unsprung rotational weight.

We hot roll an aluminum core between two thin sheets of stainless steel at thousands of pounds of pressure. This creates a molecular bond between the metals. These layers are not glued or riveted together but permanently bonded at the molecular level.

The aluminum core reduces the weight and gives greater resistance to brake fade than cast brakes. The stainless steel gives the brake strength, durability and great braking feel. You have never experienced brakes like these.

Lockheed calipers are simply the best in the world. They have been used by so many World Champions that we can't begin to list them. Precision machining and the best materials give these calipers the edge over the competition. Ask the top GP teams which calipers they use Lockheed! We are proud to be able to bring this world championship brake to American racers. They are available

The Buell RR 1000 Superbike is the latest high tech motorcycle designed & built by Buell.

in two piston or four piston versions. 95 to 225 dollars.

We can supply all the hardware needed to mount calipers, rotors and wheels to most bikes.

Buell Expansion Chambers and Silencers. Like all the high-tech equipment we sell the Buell exhaust system is superb. They are of outstanding quality at a remarkable price. Two cylinder pipes \$350. Four cylinder pipes \$750.

Buell RR 1000 or RW 750 T-shirts \$10

Ninja Gets Heavy Breathin' TM33'S From Mikuni

FLAT SLIDES WITH ACCELERATOR PUMPS

From the leader in carb technology comes the All New TM33 Flat Slide Carbs for the ZX600 Ninja and the GSX-R 750.

- Big 33mm throats provide increased mid-to-top end power.
- Flat slide design solves the problem of the low speed driveability blues that usually accompany big bore carbs.
- Built-in accelerator pump system gives excellent throttle response.
- Complete bolt-on installation: Fits under stock fuel tank and fairing - Uses stock throttle cable. **Ninja Kit** includes special rubber carb adapters, clamps, fuel hose, extra main jets and installation instructions.
- **GSX-R 750** carbs simply slide onto the stock adapters.
- So versatile that you can use the stock airbox, or K&N individual filters #RC-1824.

Available now at your favorite dealer.
Get ahead of the competition now!

Toomey Racing — To Win!

Toomey Racing RZ350 Kit

Everything you need to make your Yamaha RZ350 fast! The kit consists of our famous Toomey Racing Expansion Chamber Pipes, lightweight, quiet and re-buildable Aluminum Silencers, a special Hi-Flow Airbox, a pre-oiled K&N filter, complete jetting kit, and an aluminum Battery Box. This is a complete tuned system that is designed to work perfectly without having to play with jetting once our parts are installed. Kit saves 20 pounds in weight and provides a significant power increase right off idle to 10,500 RPM. Expect a 15 BHP increase from 10-10,500 RPM over stock. That's a bolt-on 40% power increase! **Guaranteed** and complete with instructions.

This unique stopwatch has timing in hours, minutes, seconds and 1/100 seconds up to 10 hours. Big 3 row display with split time on top, lap time in middle and accumulative time on bottom. The printer prints time, date, lap #, split time and cumulative time each lap. Also has clock/calendar function. Complete with waist belt pack, printer paper and battery.
Seiko Printing Stopwatch \$199.00

Race Track Wheel Balancer

Wheel balance is critical to your bike's stability, especially at racing speeds! Our portable precision balance system lets you accurately balance wheels anywhere. Works well even with sealed wheel bearings. C.N.C. machined from billet 6061 T-6 Aluminum. Legs fold for easy packing.

Toomey Race Track Wheel Balancer \$175.00
Centerless ground axle bars 15, 17, 20 and 25mm sizes, each \$ 18.95

QUICK DISCONNECT FUEL LINE COUPLER

Quickly, easily and safely disconnect any fuel line without gas spillage on a hot engine. 1/4 inch I.D. A must for RZ500! Fits any bike. \$19.95

WE RA THE NEW WORLD CHAMPION FACTORY

by Larry Lawrence

In the not too distant past if one of the factories decided they wanted to go racing in the U.S. it seemed they looked no further than their Californian back yard to find a rider. Mind you many of the Californian guys did a pretty decent job. Kenney Roberts, Wes Cooley, Dave Aldana, Randy Mamola and Eddie Lawson did nothing to improve the chances of riders from other parts of the country.

For the aspiring road racer who happened to live east of the Sierra Nevadas, there were few races to go to. When there was a road race, coverage was nil. In California there were several racing organizations that brought together the best competition and gave Joe Racer a chance to improve his skills.

Racing organizations existed in the east also yet they couldn't seem to generate rider interest on a large scale.

The Eastern Roadracers Association which later became Western Eastern Roadracers Association came along in 1973 and gradually the picture for riders in the Mid and Eastern U.S. became brighter. Racers like Mike Baldwin and Freddie Spencer benefitted greatly from the exposure WERA races gave them. The birth of WERA was in fact the birth of roadracing for thousands in the east.

The factories at first paid little attention to the racers in this fledgling organization but slowly the recognition came.

In 1977 Freddie Spencer won four WERA titles, shortly after that Spencer was riding a factory Kawasaki. Mike Baldwin had won the WERA Formula One title in 1977 and he too was on a Factory Kawasaki by the 1979 season.

Throughout the 1982 and 1983 season Dale Quarterly gave the Factories something to look at by dominating Superbike classes during the season and at the G.N.F. Quarterly had Kawasaki Factory help in 1984.

A west coast journalist took note of a very fast Kevin Schwantz

during the 1984 endurance season. The next year Schwantz was on a Suzuki backed Yoshimura Superbike.

John Kocinski turned heads during the 1985 endurance season on the championship winning Cycle Tech team, and picked up a Yamaha ride.

I think the factories missed on a couple of occasions, overlooking a few riders who might have done well on factory iron. Boonie Knott and Bobby Goodin came to mind as two guys who should have been given a chance.

All of the racers that I have mentioned have helped open the door to factory rides for non-Californians. That and a couple of other factors should help future racers in their quest to be noticed by Honda, Kawasaki, Suzuki or Yamaha.

WE RA should and will be a breeding ground for factory riders in the future. With the recent announcement that Kevin Schwantz could be finding several World Championship rounds this season, WERA may have its next World Champion soon.

G & G IMPORTS

Your sportbike headquarters with other items such as fork braces, clip-ons, steering dampers, fork springs, rearsets...

How to pick up a quick \$2,900,000.

There are no tricks involved here. What is involved is intelligence and skill. The intelligence to race a Yamaha. And the skill to win.

Because this year, we're offering the largest contingency program in history. With more money at more races and to more finishers than ever.

We'll be giving away up to \$2.9 million (twice as much as last year). In everything from AMA Superbike races to three-wheeler races.

And not just to professionals but to amateurs as well.

For details see your local dealer. He has everything you need to get a piece of that money.

Including Yamahas.

What Does It Cost?

Roadracing is comparatively cheaper than most motorsports. The big initial investment can be kept to a minimum by simply starting out racing in production classes. First buy a WERA rulebook for \$3. A little safety wire, duct tape and silicone seal, a few minutes with some wrenches and you will have a race ready machine. Next beg, borrow, or buy a full coverage racing suit. Racing suits come in various types. Most are leather, but the new Trim suit is a nylon type material, which is acceptable. Roadracing boots are next, they fit tight and zip up so that you can put your leathers inside or out of them. For beginners, a pair of high workboots or motocross boots are okay. Next come gloves. Any kind of leather gloves will do. Roadracing gloves are usually lightweight and tight fitting. A full coverage helmet will round out your racing outfit. A rule of thumb is that no skin may show when you are on the track. All of the above mentioned items are available from no less than twenty companies. Many companies give discounts to WERA members and many WERA members are themselves distributors of various racing items. Additional safety equipment is available and encouraged, collarbone protectors, back pads and extra elbow, shoulder and knee pads in leathers are available.

Now that you are outfitted, you need to buy a WERA Competition License for \$45 and participate in a top notch WERA Riders' School in which expert riders will teach a morning class consisting of group lectures about safety, style and technique. Then the school will head out onto the track and follow the leader around several laps. Then in the regular alternating practice sessions, if the instructor views the rider safe and competent, then the rider can participate in the next day's events as a novice. Riders' School fees vary from track and instructor, but generally stay around \$50. WERA entry fees are a bargain in themselves. The first event entered costs \$30. Second class costs \$20 and after that you may ride in as many races as you qualify in for \$10 per class. And with 16 events in the average sprint program plus practice time, that's a lot of riding.

BEGIN YOUR RACING CAREER IN '86

WERA RIDERS SCHOOL DO NOT TEACH PEOPLE
TO RACE. THEY TEACH SAFETY.

To help riders begin their roadracing careers in the best possible way, WERA has scheduled Rider's Schools in each of its Regions and engaged highly qualified instructors to conduct them. Schools vary in length and intensity. All applicants for competition licenses are required to satisfactorily complete a WERA sanctioned Rider's School and participate in two Regional Sprint events before continuing on to competition in National Sprint and National Endurance Series events. Riders' School for the 1986 season are listed below. Make plans to attend today.

K&N PERFORMANCE NEWS

K&N Stage III Intake Performance Kit For Racing Only - Not Street Legal!

K&N's new Intake Performance Kit really unleashes your horsepower. Tuning late model motorcycles with CV carburetors used to be a hassle. No more. Our Stage III Intake Performance Kit was designed for the all-out street racer class.

This high-performance kit contains K&N individual air filters, a crankcase vent filter and a complete CV carburetor re-calibration kit, which includes jets, needles, clips, shims, springs and tools — everything you need including step-by-step instructions.

The K&N Stage III Kit is not for the faint-hearted. You'll notice a tremendous increase in performance all

throughout the power range. You'll be blown away with the increased performance —

literally. You've got to feel it to believe it! The K&N Stage III Kit is also a perfect match for performance exhaust systems.

K&N Performance products are available consumer direct. Stage III Intake

Performance Kit shown is p/n 23-9087 for the 1986 Kawasaki

ZX 1000R Ninja. Send \$157.95 plus \$5.00 shipping and handling to K&N Engineering Inc., PO Box 1329, Riverside, CA 92502. Legal in CA only for racing vehicles which may never be used on the highway.

New "CO" Road Race Systems from Vance & Hines

IMPROVE YOUR POWER CURVE... INSTANTLY!

Introducing the new "CO" Series (competition only) exhaust system from Vance & Hines—designed specifically for competition road racers. This is the very same exhaust system installed on our own Vance & Hines Superbike.

Measurable Increase in Power

Computer-aided design, along with painstaking dyno and track testing, enabled us to develop the finest competition-only exhaust system available. Our new "CO" design helps high-revving engines produce a measurable increase in both torque and horsepower.

A major portion of this increase is generated by the precision-machined, aluminum exhaust spigot adapters, which bolt permanently to the cylinder head. In addition, each header tube has been re-designed to create the ideal length for maximum exhaust extraction. Vance & Hines' own high-volume, bifurcated collector permits greater exhaust expansion and velocity. The result—more torque and more horsepower!

Quick Release Convenience

Once the exhaust spigots are in place, the system is easily removed by releasing four springs. This allows instant access to vital engine components. The tail section of the system comes complete with spring mounts, too, for no-hassle megaphone removal or replacement. Completing the system is the exclusive Vance & Hines all-aluminum baffle and end cap, which provide maximum flow, while meeting all Db requirements for racing.

Improve Your Competitiveness

Vance & Hines "CO" Series Exhaust Systems will be available in Kal-Gard Black for high-performance Suzuki, Kawasaki, Yamaha and Honda engines.* So whether you ride Daytona, Laguna Seca, or your local road race circuit, a "CO" exhaust system will make your bike more competitive... instantly!

VANCE HINES

14010 Marquardt Avenue Santa Fe Springs, California 90670

*Currently available to fit Suzuki GSX-R750 and 1100, Yamaha FZ-750, and Kawasaki 600 Ninja. Systems available for other models soon.

CYCLE TECH RACING WINS 1985 TITLE

by Larry Lawrence

1985 was a great year for the WERA National Endurance Series. The final outcome of the overall championship as well as several of the class championships came down to the final round at Road Atlanta. The California based Cycle Tech Racing took the overall championship just ahead of the fabulous Speed Boys from Pennsylvania.

John Bradley the man behind Cycle Tech, assembled an outstanding team of riders and mechanics to contest the series. As far as the riders, hows Dave Aldana and Wes Cooley for starters. After Cooley's early season crash Cycle Tech picked up Joey Osowski. To round out the team Cycle Tech recruited 17 year old John Kocinski. Bill Foster was the man responsible for keeping Cycle Tech's Suzuki GSXR750 in winning form.

The combination proved to be a winner and Cycle Tech took second behind Team Hammer in their very first effort at Indianapolis.

Another first year team Solmax Racing took third at Indy serving notice of their intentions. Ronnie Bowen had done what many considered impossible, securing sponsorship from a non-motorcycle related company. Solmax USA a tanning product producer backed the team on their distinctively styled Yamaha FJ1100 based on a purple color scheme.

The first round victory for Team Hammer was the only win of the season for the team. It was a dismal season for the two-time National Champion. A rash of breakdowns kept the team sidelined for many hours during the season.

Cycle Tech went on to win round two at St. Louis finishing only seven seconds ahead of Hammer. Speed Boys now with backing from Parts Unlimited took third.

The endurance trail led to the 2 mile, 10 turn Summit Point Raceway for Round Three. Speed Boys recovered from an early race crash to take the win. C-G Racing and Z-P Racing finished second and third.

At this point in the season, the series was really building into a highly competitive one with three races completed, three teams had won. After the addition of the supfast John Kocinski at Summit, Cycle Tech went on to win the next three rounds of the series, (Pocono, Pueblo and Loudon) in convincing fashion.

Round number seven was the Granddaddy of them all, the 24 Hours of Nelson. If any team was going to catch Cycle Tech, they were going to have to do it at Nelson. The Speed Boys responded with a beautiful ride to stay in contention.

H.S.C. Racing finished second and Cycle Tech took third after an engine change.

Speed Boys started a streak of their own by winning round eight at Road Atlanta. Larry Burkholder, Bob Frank, Mark Heiser and John Yurejczak were showing what a little teamwork between racing buddies could accomplish.

Cycle Tech came back and won a rainy round nine at Blackhawk Farms.

The second 24 hour race of the season was held in the desert of Willow Springs, California. Cycle Tune took that round. The attribution rate was high, in that race Cycle Tech and

Team Hammer broke while leading.

Dean Swims got a couple of his friends together for round 11 at Roebing Road. Since Mike Harth and Ron Ewerth were on Swims friend list, it's not hard to see why they won that round on the Cycle Performance FZ750.

Cycle Tech took round 12 at Texas World Speedway, but the Speed Boys stayed close enough to stay within shooting distance.

The last round before the final was held at Craten Raceway in Michigan. Speed Boys were there but Cycle Tech skipped the round. Speed Boys by virtue of their third place finish behind Joe Brothers Racing and Filthy Five Canada, grabbed enough points to be very close to Cycle Tech going into the last round.

A shake up in the Cycle Tech camp left insiders wondering if they could be a strong team at the Grand National Finals.

All doubts were shattered when Cycle Tech showed up in full force including Aldana, who has missed the Texas World round.

Cycle Tech won the final and were crowned 1985 National Endurance Champion.

Only 20 points down in the standings and taking second overall was Speed Boys. Solmax Racing finished third and won the Heavy weight Production class. Generic Racing, Team Wanker, Local Motion Racing, Cycle Speed Racing and Team Hammer were the other class winners.

Cycle Tech seemed to have the perfect combination of riders. Dave Aldana the senior rider with the experience of World Championship endurance racing under his belt. Joe Osowski one of the most experience American endurance pilots who rode steady and fast at every race. And finally the young John Kocinski who seemed to break track records everywhere he went. Kocinski garnered a lot of publicity through the series and was signed by the Yamaha factory a few months later.

HOW TO CASH-IN ON SUZUKI'S \$285,000 *GSX-R* NATIONAL CUP SERIES.

First, get your hands on one of Suzuki's race-ready GSX-R 750s or 1100s...the machines destined to clean-up in the 750 Stock and Open Stock Production classes.

Next, go to your Suzuki dealer for details on the 1986 Suzuki GSX-R National Cup Series. The races are sanctioned by

AFM, WERA, AAMRR, MRA, OMRR and offer a total purse of \$285,000, including a \$40,000 final payoff at the Race of Champions at Road Atlanta.

Then, get out there and start winning. For details and your free participant application, see your nearest Suzuki dealer soon.

**MAN AND MACHINE
WORK LIKE A SINGLE MOVING PART.**

The Limited Edition GSXR750R will compete for separate 750 Superbike contingencies and is not eligible for the 1986 Suzuki National Cup Series. Visit your participating Suzuki dealer for free GSX-R racing audio cassette and Kevin Schwantz poster. Tune in MOTORCYCLE WORLD radio with Larry Huffman, sponsored by Suzuki, Sundays, 10-11 p.m. KOLA-Los Angeles, XTRA-San Diego, KTFM-San Francisco, KYLO-Sacramento & 4 a.m. WLS-Chicago, IL.

They're calling it The New Team Hammer with the motto "Young, Tough and Hungry." What that all means is that two-time WERA National Endurance Champion Team Hammer is back with the strongest racing program in the team's five-year history, staffed with a trio of young riders and a new crew chief.

Team Hammer returned to the WERA winner's circle after a 12-month dry spell by winning the first race of 1986, riding a new Suzuki GSXR1100. Hammer's 1986 racebike had first rolled on a racetrack just 10 days before the event, held April 12 at Indianapolis Raceway Park in Indianapolis, Indiana. But that didn't keep Team Hammer riders Doug Toland, Pat Hernon and Dave Sadowski from running away from the competition and winning the six-hour event, entered by 79 teams.

Team Hammer has been completely restructured for the 1986 season, under the leadership of Team Hammer founder Bruce Hammer. Toland, from Buena Park, California, is 22 years old, and Hernon (from Columbus, Ohio) and Sadowski (from Exeter, New Hampshire) are both 21 years old. They're riding a stock-framed GSXR1100 racebike built and prepared by crew chief Gary Hilgenberg of Long Beach, California; Hilgenberg is a former dirt track racer and tuner and at one time operated a Suzuki dealership in Ames, Iowa. In 1985, Hilgenberg tuned Wayne Rainey's RS500 for MacLean Racing.

Team Hammer's basically stock engines are prepared by Bill Foster, who now works for Vance & Hines Racing in Santa Fe Springs, California; Foster was the man behind Cycle Tech Racing's successful 1985 WERA season.

When not racing, Toland is a test rider for U.S. Suzuki Motor Corp., Sadowski is a motorcycle salesman for Adventure Suzuki in New Hampshire and Hernon sells motorcycles for a dealer in Columbus.

Team Hammer's 1986 endurance racing effort is sponsored by Vance & Hines, Arai Helmets, Bel-Ray Lubricants, Emgo Oil Filters, Performance Machine, Cam 2 Racing Gasoline, Fox Racing USA, ND Spark Plugs, Dunlop Tires and Diamond Chain.

Team Hammer's Doug Toland at Indianapolis Raceway Park, April 12.

Team Hammer crew chief Gary Hilgenberg modified the Team Hammer Suzuki's swingarm by adding bracing and then had the assembly heat treated to T-6 specifications.

Ronnie Bowen looks over his eager riders school class.

The final round of the Endurance in 1985 saw #51 Cycle Tech take first over #38 Bridgeport Kawasaki and #5 Speed Boys.

RIDER'S SCHOOLS

One of the most asked questions from potential new racers is: "How do I get started in road racing?"

The first major step a new racer has to accomplish is the Rider's School. WERA has held formal schools since 1980. In 1983, WERA started to sanction and accredit independent Rider's Schools. Today WERA recognizes the following Rider's Schools:

- Rochester Road Racers
- Southeast Asphalt Academy
- MCRA School
- CRRC School
- Casport School
- Penguin School
- MARRC/MSLVI

This year WERA will recognize the on course portion of the Keith Code Superbike School and will require riders having taken that course to take only the written and classroom portion of the WERA schools. WERA is working on forming another school in the North Central Region, which will deal with Grattan Raceway in Michigan.

The main purpose of the school is to give the student a good, in-depth orientation to the sport. Some of the topics covered are the flagging procedures, five minute warm-up lap, courtesy on and off the track, accident avoidance, basic race lines, steering, braking and the topic of speed is touched upon briefly since the main goal of the school is safety and the track, not speed.

The Rider's School is a good way for a potential racer to see if he/she will like racing. Many of the items covered in the school can be applied directly to street riding if one chooses not to compete on the track.

ENDURANCE the name of the game

IN 1984 TEAM HAMMER WON THE WERA NATIONAL ENDURANCE SERIES. IN A FIELD OF 244 TEAMS AND 11 EVENTS INCLUDING TWO 24 HOUR EVENTS, TEAM HAMMER COVERED 7,692 GRUELING MILES. A TRUE TEST OF MAN AND MACHINE. DURING THESE 7,692 MILES TEAM HAMMER DEPENDED ON AND WAS NEVER LET DOWN BY EMGO OIL FILTERS, NOT SPECIAL FILTERS, JUST THE SAME OIL FILTERS USED EVERYDAY BY THOUSANDS OF MOTORCYCLISTS.

WHEN YOU ONLY HAVE ONE—
IT SHOULD BE NUMBER ONE.

Auteroche

Not all halogen lamps are created equal. AUTEROCHE HALOGEN HEADLAMPS FROM FRANCE are designed for motorcycles. AUTEROCHE lamps deliver as much as twice the light of original equipment headlamps. AUTEROCHE puts that light where you need it most, and that's important when you only have one headlamp. AUTEROCHE lamps are built to take the punishment motorcycles dish out. The best thing is that you don't have to hock your leathers to pay for one. For quality performance and price, **AUTEROCHE is number one in motorcycle lighting.**

WHO ARE THESE RACERS?

When the riders of the Western Eastern Roadracers' Association gather for a weekend, it's anything but a ho-hum two days. Before the weekend is over, many of the riders will have reached speeds of 160 mph on their motorcycles, occasionally riding so low through turns they must drag their knees on the asphalt! Some will win trophies and points. Some will win substantial sums of cash contingencies or product. But, all will have spent a weekend of safe, hassle-free, high-speed action on a road racing course designed to test the style and grace of riders and the power and handling of their machines.

Who are these racers and where do they come from? And why?

Most of these riders compete in the WERA events because of the pure satisfaction they derive from racing their favorite form of transportation. Plus, racing provides a thrill of challenge far greater than the daily nine-to-five grind of the regular work week. Besides, gathering at a race track with a horde of others who have the same interest provides the ultimate in diversion.

Of course, there are those riders who find that they really do have a knack for tossing a motorcycle nearly on its side to get through a twisting turn quicker. These WERA riders do strive to become professional champions, seeking worldwide notoriety and the financial success that goes along with it. World Champion Freddie Spencer, Jr. began his road racing career at the age of 14 at WERA sanctioned events!

WERA riders come from all over the United States, Canada and Mexico. They range in age from an impetuous 12 to a refined 53. Their occupations range from welders, machinists and laborers to teachers, graduate students and lawyers. Their names may be as unusual as Lannuzelli or as common as Smith and Jones.

The one thing all the riders have in common is an interest in safety. They all agree that racing on the track is safer than riding on streets and highways. Safer? Yes! There are no cars on the race track and no unexpected obstacles like dogs yapping at the heels of riders. Plus, all the traffic is headed in the same direction and each of the competitors has his motorcycle thoroughly inspected by expert technicians prior to each event to insure a high-speed, but safe weekend.
